

The diagram shows a circular reel ship with a central hub and six weights attached by arms. The weights are arranged in a hexagonal pattern: one at the top, two on the left, one at the bottom, and two on the right. Each weight is a small circular disc with a central hole and a slot or notch on its side.

Note: Reel ship with this setting

It is important to note that the brake weights must be set in opposing pairs to maintain a balanced. That is, a single weight should not be "engaged" or "disengaged" by itself. The possible combinations are as follows:

1. All six brake weights "engaged".
2. Four brake weights "engaged" and two brake weights "disengaged".
3. Two brake weights "engaged" and four brake weights "disengaged".
4. All six brake weights "disengaged".
5. Maximum braking is obtained when all six brake weights are in the "engaged" position.

CENTRIFUGAL BRAKING SYSTEM

Please specify reel model number and number at the bottom of the frame when ordering parts.
